

# HYGIENIC TEXTILES

Resuinsa and Carmela Martí collaborate to provide hygienic solutions for all the textile in the hospitality industry.

## How to guarantee the hygiene of your hotel without losing comfort for the guest?

Resuinsa and Carmela Martí created **"HYGIENIC SPACES"** as a textile solution that guarantee the safety and hygiene of each space to create pleasant environments.

Travel is an experience and every step that the guest takes inside the hotel should reflect the personality of the hotel.

We would like to introduce you to our 3 H's program for your property:

## HAPPY · HYGIENIC · HOTELS

### How?

Thanks to the quality of the hospitality textiles that we produce, you can create cozy environments with a line of products that we have developed, that features the hygiene of each space.

Our top priority is to make sure the guest has an unforgettable experience. Let us not lose our soul!

# HYGIENIC KIT

When checking in, each guest can receive a **HYGIENIC KIT**, which can contain the following products, produced by RESUINSA:

- A **bag** 42X58 cm made of antibacterial fabric with virucidal properties using the silver ion technology. This bag can be made of 100% cotton or 100% polyester, white colour and closure with laces.
- A **pair of foot covers** to place on your shoes, made of 100% polypropylene, adjustable with rubber bands. One size and white colour.
- A **kimono robe** with three-quarter length sleeves, one size, made of antibacterial fabric with virucidal properties using silver ion technology. This robe can be made of 100% cotton or 100% polyester, white colour.
- A pair of **slippers**, one size, to wear when you arrive in the room. Made from recycled fibers from hospital-ity products with a polyester blend and different fibers. Also, these slippers are recyclable, with a water repellent finish and non-slip sole. Jasper white colour.
- A **protective visor for adults**, with a PVC screen and transparent polypropylene fastening. Disinfectable and reusable.
- A **mask** with a case to protect them when not in use. At Resuinsa we are committed to sustainability and the environment, which is why we choose reusable and re-cyclable masks.
  - Reusable hygienic mask with FFP2 equivalency (protects to user and protects other persons) complies with the new UNE-0065 standard. Sustainable mask with durability more than 30 washes. Rectangular in shape, made of 100% hypoallergenic cotton fabric and white colour. Available in three sizes: Adult, children from 6 to 9 years and children from 9 to 12 years.
  - Mask cover made of antibacterial fabric with virucidal properties using the silver ion technology. Available in 100% cotton or 100% polyester, white colour and closure with ribbons. Both, masks and visors, are fully customizable with the property logo, custom designs, or positive messages.

**RECYCLABLE MASKS + CUSTOMIZABLE**  
=

**HAPPY · HYGIENIC · HOTELS**

We have our **HYGIENIC KIT FOR KIDS**, which includes a children's visor with a PVC screen and transparent, disinfectable and reusable polypropylene fastening. It is customizable with an erasable marker pen and magic eraser, also including 2 designs to choose from: Mickey, Indian, Bunny and Crown. It is supplied with a storage box that can be personalized by children, giving free rein to their imagination.

**We turn protection into a game!**

# HYGIENIC ROOM

The bed must be the maximum exponent of hygiene.

## How?

### 1. HYGIENIC PROTECTION OF SHEETS WITH **ANTIBACTERIAL QUILTS, PLAIDS AND CUSHIONS.**

It is easy for external factors such as jackets or suitcases to meet the sheets in which we eventually sleep and that touch our body directly. Top sheets such as quilts and plaids, which are removed at bedtime insulate the sheets and protect them from any bacteria.

These fabrics are washable at 60°C, they can be treated with special antibacterial and viricidal detergents, which guarantees their complete disinfection.

### 2. DAILY WASHING OF TEXTILES AT HIGH TEMPERATURES.

**Bed textiles** such as pillowcases, sheets and duvet covers are changed daily by the hotel staff. The industrial washing of sheets is carried out at 65°C and is subject to drying at 180°C, guaranteeing that no viruses survive.

### 3. OTHER BED ELEMENTS, WHOSE WASHING IS NOT SO FREQUENT.

We propose several options with antibacterial fabric with virucidal properties using silver ion technology:

- **Pillows and duvets** made of 100% polyester microfiber exterior fabric and white silicone hollow fiber filling.

- To protect the mattress, we have **mattress protectors** in 100% Polyester fabric as well as mattress covers (complete or ½ cover), **bottoms sheets** with elastic corners. As well as over-tops to protect the topper, all of them with the option of 100 % cotton or 100% polyester in white colour.

- As a protection measure for the pillow and the duvet, we have **hygienic interior covers** whose purpose is to protect the fillers that are currently in hotels. On top of this inner cover is the outer cover that is washed daily, making this option a very economical alternative. Both for the inner pillow and duvet covers, as well as for the inner mattress covers, adjustable bottoms and top cover, we offer the option of manufacturing in a 100% polyester barrier fabric with a waterproofed finish, white colour.

- In order to securely store pillows, square pillows, blankets and duvets in the wardrobe, we have hygienic **protection bags** of different sizes with edging and closure of tapes, made of antibacterial fabric with virucidal properties (100% cotton or 100% polyester). We can also offer these items with the 100% white polyester barrier fabric. Additionally, we offer white polypropylene bags and transparent plastic covers for blankets and duvets that have a zipper closure and handle, also fulfilling the protection function of these elements.

# HYGIENIC BATHROOM

# HYGIENIC WELLNESS

## HYGIENIC BATHROOM

Bathroom textiles such as towels, bathmats and bathrobes are also washed at 65°C so hygiene is guaranteed. To stage the amenities, we offer a bag 18x20 cm made of antibacterial and virucidal properties fabric using silver ion technology. Can be in 100% cotton or 100% polyester, white colour, and zip closure.

What happens if there is a possible infected host? In order to remove all the textiles that the client has used, their clothes from the wardrobe and other personal objects, we have manufactured a duffel bag 45x100 + 20 cm with a drawstring closure and a handle, made of 100% polypropylene fabric and red color to make it visually recognizable.

## HYGIENIC WELLNESS

The spa area must reflect harmony and serenity, while ensuring absolute hygiene.

Treatments are individualized and maintaining safety distance becomes a priority. For this we have developed a series of products:

For the guest:

- A pair of **slippers**, one size, to wear when you arrive in the room. Made from recycled fibers from hospitality pro-

ducts with a polyester blend and different fibers. Also, these slippers are recyclable, with a water repellent finish and non-slip sole. Jasper white colour.

- A **pair of foot covers** to place on your shoes, made of 100% polypropylene, adjustable with rubber bands. One size and white colour.

- A **kimono robe** with three-quarter length sleeves, one size, made of antibacterial fabric with virucidal properties using the silver ion technology. This robe can be made of 100% cotton or 100% polyester, white colour.

For treatment areas:

- **Stretcher cover** made of antibacterial fabric with virucidal properties using silver ion technology. Can be made of 100% cotton or 100% polyester, white colour. We offer the option of manufacturing in a 100% polyester barrier fabric with a waterproofed finish, white colour too.

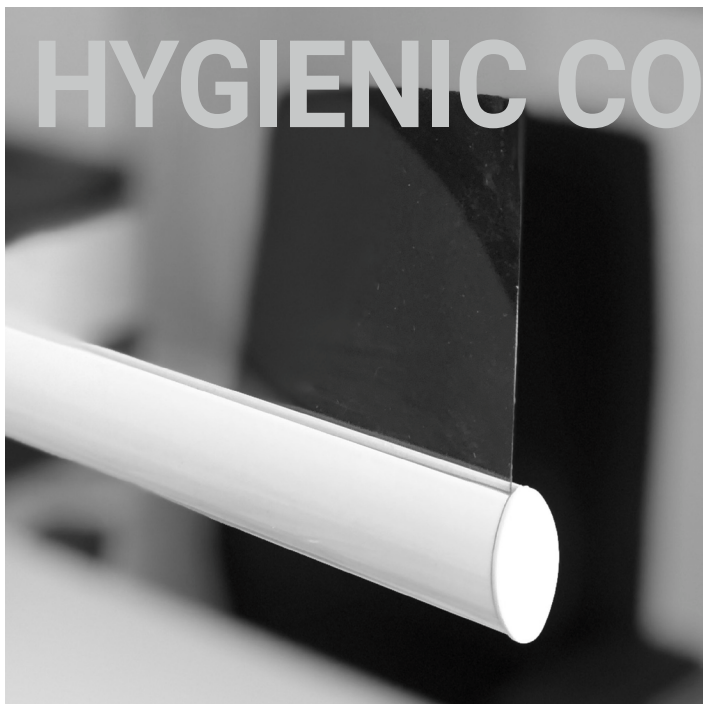

- **Pillows and rolls** with outer fabric is antibacterial with virucidal properties.

Ensure the safety distance and separation of spaces by using **curtains** or **Japanese panels** with antibacterial/virucidal finish.

It is essential to use towels to cover the hammocks, because with the industrial washing at 60° are 100% hygienical.

# HYGIENIC COMMON AREA

The lobby is the first thing the guest sees upon arrival at the hotel. It must reflect safety and comfort without losing the soul and personality of the establishment. The guest must feel welcomed and safe. For this we have developed a series of articles:

## 1. TRANSPARENT ROLLING SCREENS

Perfect for separating spaces and keeping the safety distance. Whether for hotel reception, separation of tables in restaurants or common spaces, it offers great flexibility since the height is adjustable and when collected takes up minimum space. Its PVC composition makes it easy to disinfect with cleaning products.

## 2. FIXED SCREEN

Fixed transparent screen system hung by two stainless steel cables helps to maintain a safe distance. Its PVC composition allows easy disinfection with cleaning products or bleach.

## 3. ANTI-BACTERIAL FIRE CURTAINS

Our curtains are made from fireproof + anti-bacterial fabrics, ensuring that a virus cannot be transmitted. They can be cleaned with disinfectant. Also, according to expert recommendations, they are disinfectable with Ozone and steam at 100°.

## 4. JAPANESE ANTI-BACTERIAL PANELS

They can be used to separate environments in the lobby or common areas providing greater privacy. Its Velcro system makes it quick to assemble and disassemble. Made of antibacterial, virucidal and fire-retardant fabrics or washables at 60°.

## 5. COVERS FOR CHAIR, ARMCHAIRS AND SOFAS

Hygiene of upholstered elements can be complicated, so we make chair covers, sofas and armchairs washables tailored to your needs, making them easier to wash at 60°C for disinfection. For non-removable furniture we offer fabrics with bactericidal and virucidal properties.

**HYGIENIC COMMON AREAS + INTERIOR DESIGN**

=

**HAPPY · HYGIENIC · HOTELS**

# HYGIENIC RESTAURANT

Textile tablecloth is the best option to dress the tables guaranteeing maximum hygiene and creating a pleasant experience for the guest.

## Why?

- **On a table without tablecloth there is a lot more bacteria 304 ufc/dm<sup>2</sup>** according to the Bioburden report of the Textile Technology Institute (AITEX). Disinfecting tables with a disinfectant is not enough.
- **Disposable tablecloths do not guarantee the non-spread of viruses**, according to a publication by the Spanish Ministry of Health dated April 4, 2020 on SARS-CoV-2, it can remain active for 3 hours on a paper surface.
- Keep in mind that **the restaurant is part of the identity of the hotel** and will influence the general experience of the guest.

Textile tablecloths, on the other hand:

- **They guarantee total disinfection**, as they are washed at 65°C and ironed at 180°C in the industrial flat iron. These items must stay packaged as they were received from the laundry until placed on the table, so 100% safety can be guaranteed. In addition, as an extra measure of protection, we offer **table protection covers** made of 100% Polyester with antibacterial fabric with virucidal properties using the silver ion technology. Available with or without PVC.
- **Show quality** and offer a pleasant experience in the restaurant. This should be a moment of satisfaction, where the guest can relax, and a well-dressed table is an important part of it.
